The Next Chapter Starts Here

PCI DSS: The Next Chapter Starts Here

The PCI DSS Story

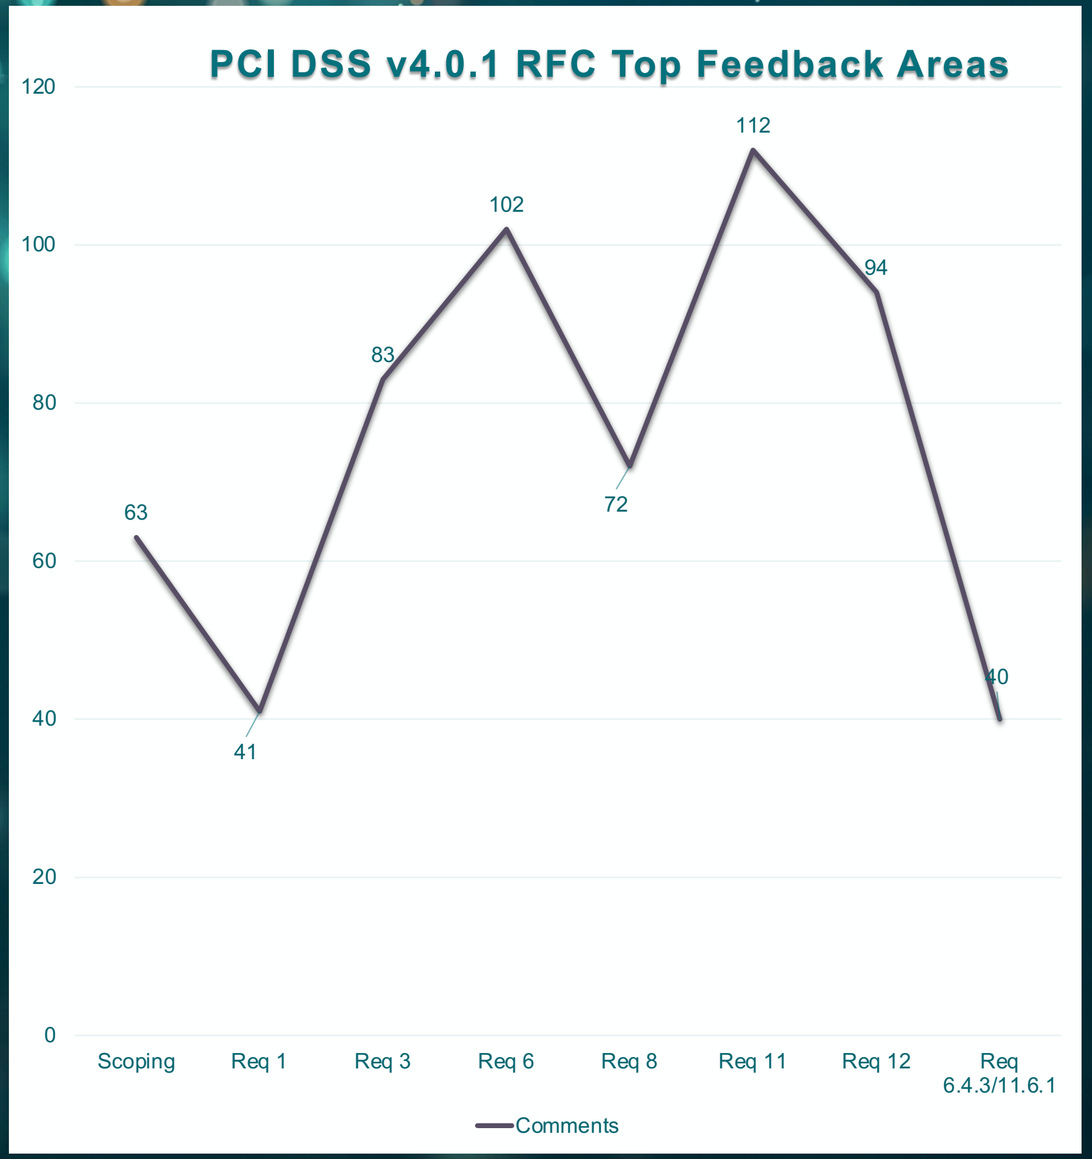

Goals of the PCI DSS Revision

1. Establish environmental security structure not solely based on PAN
2. Provide flexibility to apply security rigor based on risk
3. Define clear scope impact for use of PCI SSC validated solutions
4. Optimize and modernize validation documents

PCI DSS v4.0.1 RFC

From 8 June - 20 July 2026

Based on RFC Feedback…

Objective-Based Requirements

Clarify Customized Approach and Compensating Controls

Add 3DS Core and TSP into PCI DSS

And AI…

Move 3DS Core and TSP into PCI DSS

PCI DSS will apply to three types of data:

Account Data

- For entities that store, process, transmit account data

3DS Sensitive Data

- Defined in the *PCI 3DS Data Matrix*
- For 3DS Providers that perform or facilitate 3DS transactions

TSP Payment Tokens & Payment Token Data

- For Token Service Providers that generate or issue EMV payment tokens

Appendices will not apply to general PCI DSS population

Objective-Based Requirements

Focus on what to implement, rather than how to implement it

- As needed, to simplify complex or confusing requirements
- Level of detail for most PCI DSS requirements will remain

Combine Customized Approach & Compensating Controls

To address feedback

- One approach for meeting a requirement differently
- Consolidated worksheet to address either option

PCI DSS and AI

Get Involved with Changes to PCI DSS

RFCs for all stakeholders

Frequent meetings with the DE-TGG

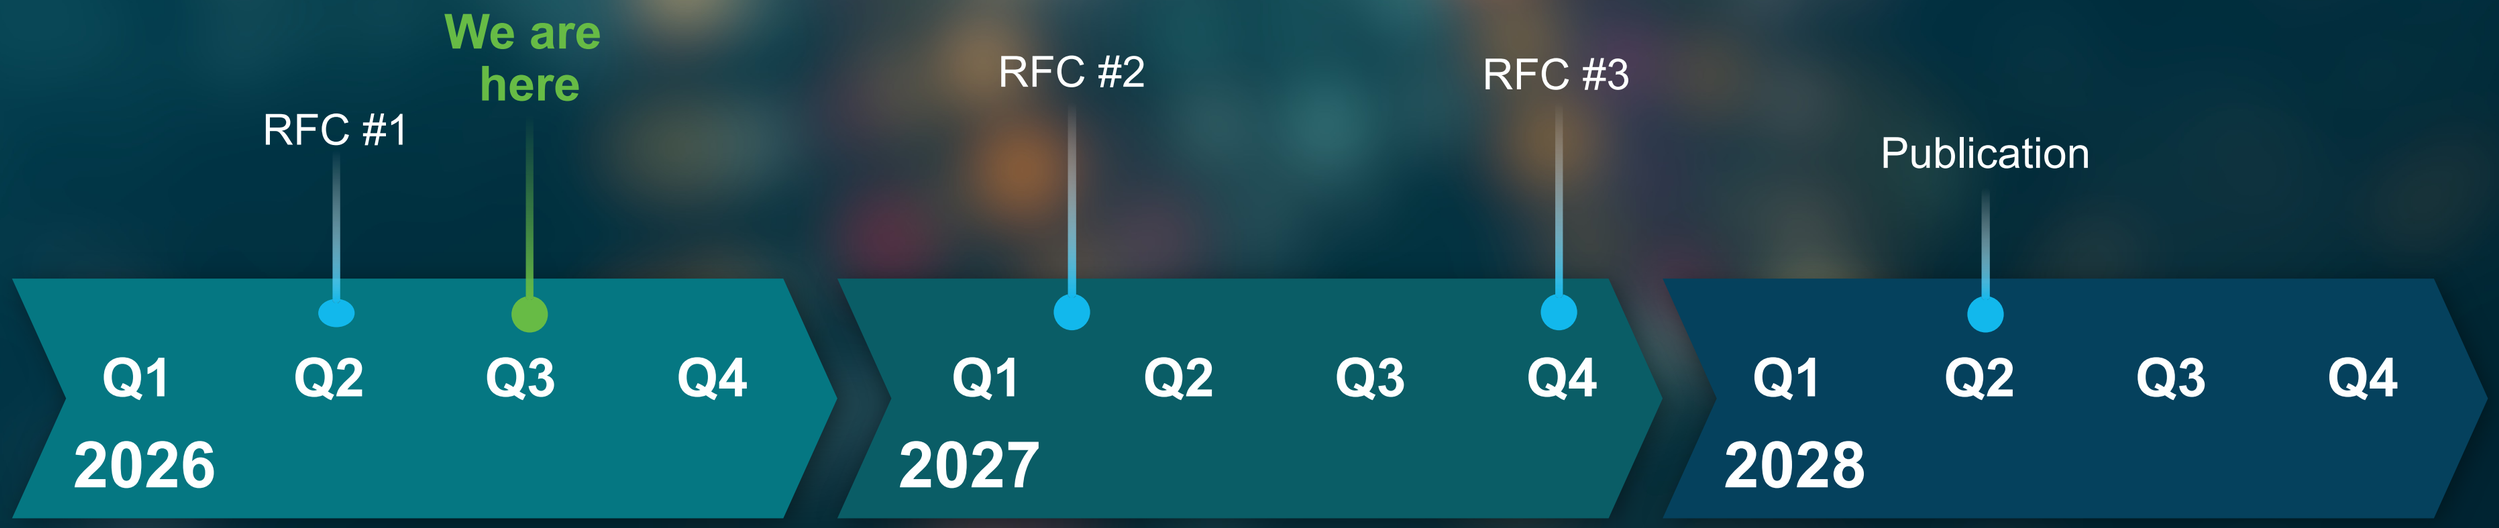

Online collaboration with BoA, GEAR, TGG

Many opportunities to participate – please join us!

Estimated Timeline for Changes to PCI DSS
